OPD

Patient registration

- The patient management includes capturing of complete and relevant patient information. It should automate the patient administration functions to have better and efficient patient care process. This includes inpatient, out patient registration and easy retrieval of medical records of patients.

Doctors availability check

- Checking the doctors availability is the major requirement for the front office team. They may receive calls or enquiries from patients regarding the doctors availability and for scheduling the consultation.

Patient case history record

- Should get the visibility about the patient records including the patient's contact details, admission records, and consultation history and discharge details. This should even take care of package deals for a patient at a fixed cost.

Reminders to patient

- Consultation reminders need to send to patient on periodical basis, through various modes like, whatsapp, telegram, SMS and email etc.

IPD

Patient registration

- The patient management includes capturing of complete and relevant patient information. It should automate the patient administration functions to have better and efficient patient care process. This includes inpatient, outpatient registration and easy retrieval of medical records of patients.

Doctors availability check

- Checking the doctors availability is the major requirement for the front office team. They may received calls or enquiries from patients regarding the doctors availability and for scheduling the consultation.

Patient case history record

- Should get the visibility about the patient records including the patient's contact details, admission records, and consultation history and discharge details. This should even take care of package deals for a patient at a fixed cost.

Bed/ Room availability and bed shifting

- Before admitting the patient, it is necessary to check availability of rooms or beds. Also categorization of beds and shifting of bed or rooms are also important.

Investigation**Investigation summary**

- This include the patient case history, general examination report, personal history, medical history, allergy history, Laboratory details, MRI, CT scan, X-ray etc..
